UiPath Process Mining

Take an x-ray of your processes to optimize how your robots, people and systems work together

UiPath Process Mining is an advanced platform for continuous business process optimization. It takes data from IT systems and transforms it into intuitive process visualizations, providing a holistic view of business processes.

Benefits

The UiPath Platform is the only automation platform with integrated Process Mining, showing business context and impact of automation on end-to-end processes.

- Kick-start process mining with AppOne, our out-of-the-box template
- User-friendly process visualization makes process mining easy
- Connect to any system, no third party ETL tool required
- Use tags and KPIs to align processes with business goals

What features are included?

Fact-based view of company processes

UiPath Process Mining turns end-to-end process data into intuitive visualizations and dashboards.

You can deep-dive into performed activities and identify bottlenecks, process deviations and overall inefficiency and risks.

Uncover the best workflows to automate

A holistic view of all activities in your process makes it simple to identify improvement opportunities, including automation.

Prioritize the automation potential of your processes based on the business impact of each interaction, complexity and RPA readiness.
Continuously monitor and optimize your processes

Make your processes more resilient by adopting an agile approach to optimization. Your processes are subject to change, they need to be **continuously monitored and optimized** to keep up with internal and external developments. With its extensive process monitoring capabilities, UiPath Process Mining lets you track progress, so that you're always on the front foot when it comes to your processes.

**Drive bottom-up process change**

Created for the business user, UiPath Process Mining delivers data-driven insights to employees who have the most impact on processes. Role-based access and easy dashboards enable everyone to be actively involved in driving process improvement.

**How does it work?**

1. **Connect Data**
   - Extract data from the IT systems that store process-related information

2. **Configure**
   - Translate your business outcomes into process KPIs and tags

3. **Get the insights**
   - Analyze and monitor your processes to get actionable insights

4. **Act On Facts**
   - Act on those insights by strengthening interactions within end-to-end processes

**Future-proof your processes with UiPath Process Mining**

Propel your automation program to new heights, with data-driven insights on end-to-end processes.

Implement scientific process change to drive efficiency and growth, leveraging the entire UiPath platform, designed for the Hyperautomation era.
