

SAP and Robots: Better Together

Elevate enterprise resource
planning with RPA

Ushering SAP customers into the “automation first” era

The “automation first” era has arrived. UiPath delivers the platform that enables digital transformation in the enterprise, improves customer experience, and increases employee engagement.

UiPath Robotic Process Automation (RPA) is the perfect complement to SAP. It's the easiest and fastest way to migrate to S/4HANA. And it connects SAP to other applications to automate business processes.

RPA is the fastest growing enterprise technology, and UiPath is the most widely adopted RPA platform in the world today. Let us demonstrate how we deliver more value from your SAP investments today.

Accelerate S/4HANA migration

The high costs and uncertainty of a large-scale migration project can be daunting. But they're much more approachable when you leverage RPA to complete the project in less time and with fewer resources.

If your goal is to manage a stress-free migration to S/4HANA, UiPath can help you find the way forward.

Expedite testing

Eliminate the need to develop test scripts by having a digital workforce do it instead.

Validate at scale

Complete several months worth of test processes in days with RPA.

Achieve 100% accuracy

Eliminate the risk of inaccurate testing.

Automate as you go

Make your tests the basis of post-migration process automation.

Drive digital transformation

Large volumes of repetitive, digital tasks have no place in the modern enterprise. UiPath uses RPA to enable greater efficiency, quality, and employee and customer satisfaction.

We blaze a trail to digital transformation by making SAP the true center of your organization's workflows.

Simplify complex integrations

Bridge disparate systems and processes both inside and outside of your SAP ecosystem to minimize tedious, manual tasks.

Accelerate productivity

Reduce the time and cost for cross-platform processes and free up personnel to focus on value-add functions.

Reduce risk

Complete tedious tasks compliantly, securely, and accurately.

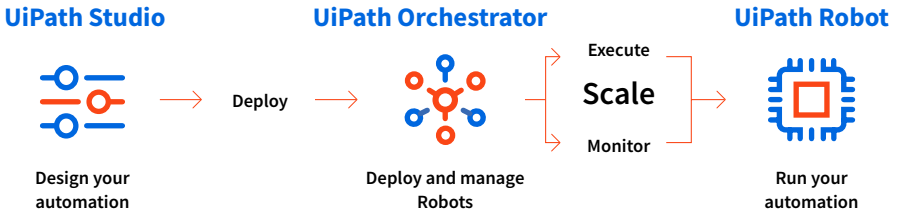

Enhance process quality

Deliver better process consistency and enforceability, backed by a full audit trail.

The 3 components of the UiPath Platform

The UiPath Enterprise RPA platform provides a scalable and secure automation solution to power your automation first strategy. It consists of 3 key components—Studio, Orchestrator, and Robot.

The 3 components work together seamlessly—delivering unmatched, innovative, end-to-end solutions that give you a competitive edge in your customer experience, the experience of your employees, and an increase in process compliance.

The 5 pillars of Enterprise RPA

Comprehensive benefits for any enterprise

Open

UiPath's extensible platform offers deep integrations and pre-built automation activities with the technologies you already use like SAP.

Our platform is open to learn, share, and collaborate, with a 300,000+ user community.

Rapid

The UiPath ecosystem is optimized for fast development and rapid ROI. 88% of UiPath deployments finish in 6 months or fewer.

UiPath offers worldwide implementation support, certified training, and a vast network of partner integrators.

AI

UiPath Robots are learning new AI skills to automate more. Use out-of-the-box AI skills, source specialized AI skills from the ecosystem, or integrate your own AI skills.

Scalable

RPA at enterprise scale. Deploy and manage any variety and number of processes from front-office to back-office, regardless of complexity.

Trusted

Trusted by 60+ government agencies and thousands of commercial companies, the UiPath platform includes the security and audit capabilities you need to simplify compliance with the regulations that matter to you.

UiPath is Ranked the RPA Leader

The only vendor to be named the “Leader and Star Performer” by Everest Group 2 years in a row. UiPath is ranked as a leader in the 2018 Forrester Wave™ report.

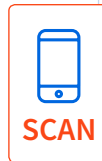

“UiPath is a Leader with shared services and ease of bot design. UiPath is one of the fastest growing RPA vendors.”

— Forrester Research

Let’s continue the conversation

We look forward to telling you more about each and discussing how we can optimize SAP software for your enterprise.
