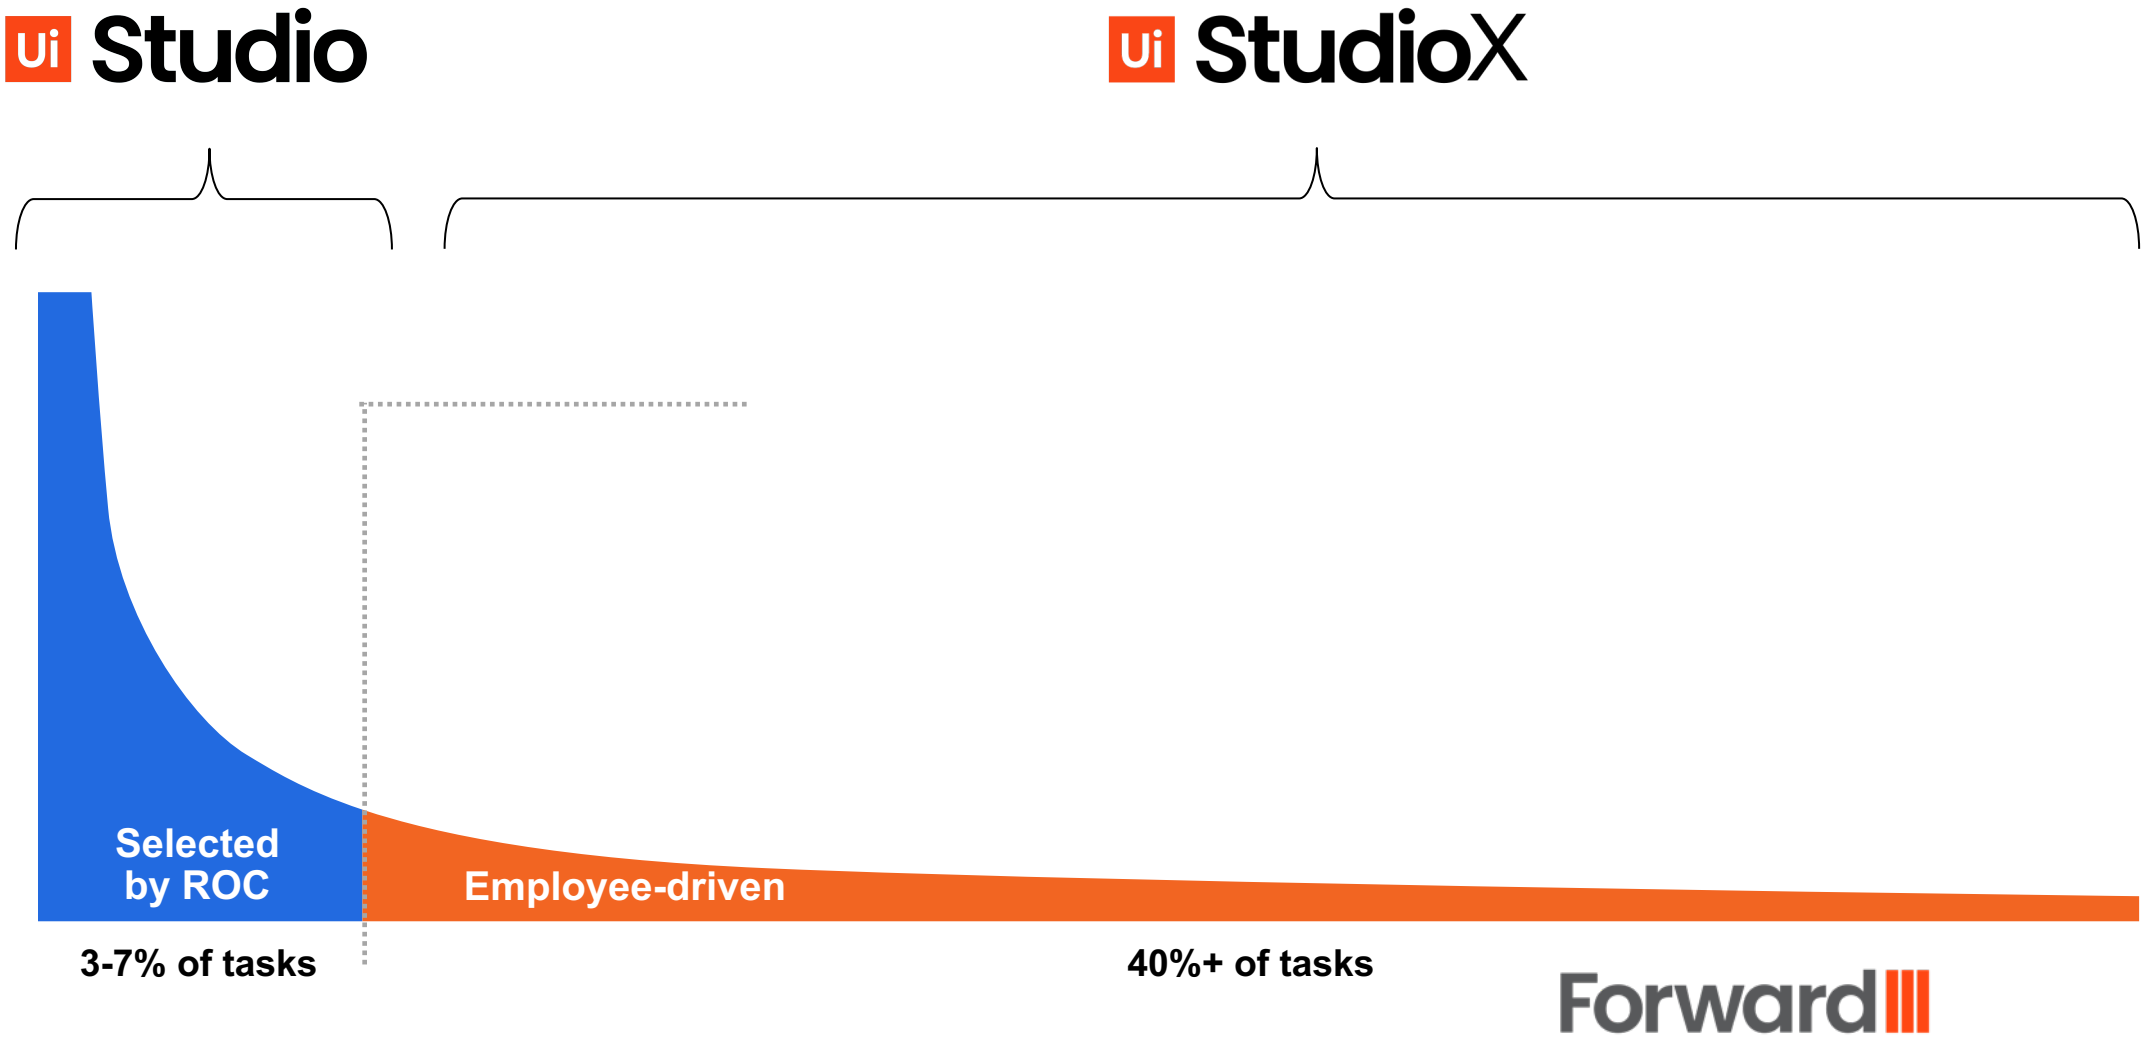
UiPath Studio versus UiPath StudioX



UiPath Studio automation workflow

Business Analyst

Identifies process

Most knowledgeable on processes that could be improved by automation. Identifies the issue and brings it up to an RPA developer.

RPA Developer

Creates workflow

Develops the process according to backlog, delivers results with help from Business.

RPA Admin

Runs the workflow

Schedules the robots in Orchestrator or creates the setup for the Business Analyst to use the attended robot.

Empowering your Business owners

Business Analyst / SME

Identifies tasks

Creates the automation

Runs the automation

Analyzes the results

Forward III

Let’s see StudioX in action

UiPath™

What does StudioX bring?
